

WSKS 2012  
5th World Summit on the Knowledge Society

## **Mobile Approaches to Electronic Records Management in Transformation of Government Organizations in Turkey: Sample Practice in Ankara University**

Fahrettin Özdemirci  
Özlem (Gökkurt) Bayram  
Mehmet Altay Ünal

This Project is supported by "The Scientific & Technological Research Council of Turkey"  
and "Ankara University"

# Presentation Overview

- **EI&RM System Integration to e-Government Procedures**
- **Breaking barriers to EI&RM**
- **Project- based approach**
- **Ankara University's Policy & Strategy**
- **Structuring and Institutionalization of BEYAS & e-BEYAS models**
- **Software and System Architecture**
- **Transition to Mobile Records Management**
- **The Last Word**

Procedure

## Institutionalization of e-BEYAS

## Transition Process to e-BEYAS

- Determining work processes and records flow and preparing flow schemes of concerning process,
  - Defining the hierarchies,
  - Determining the owner and responsible ones of the process and determining the relations between the processes
- 
- 

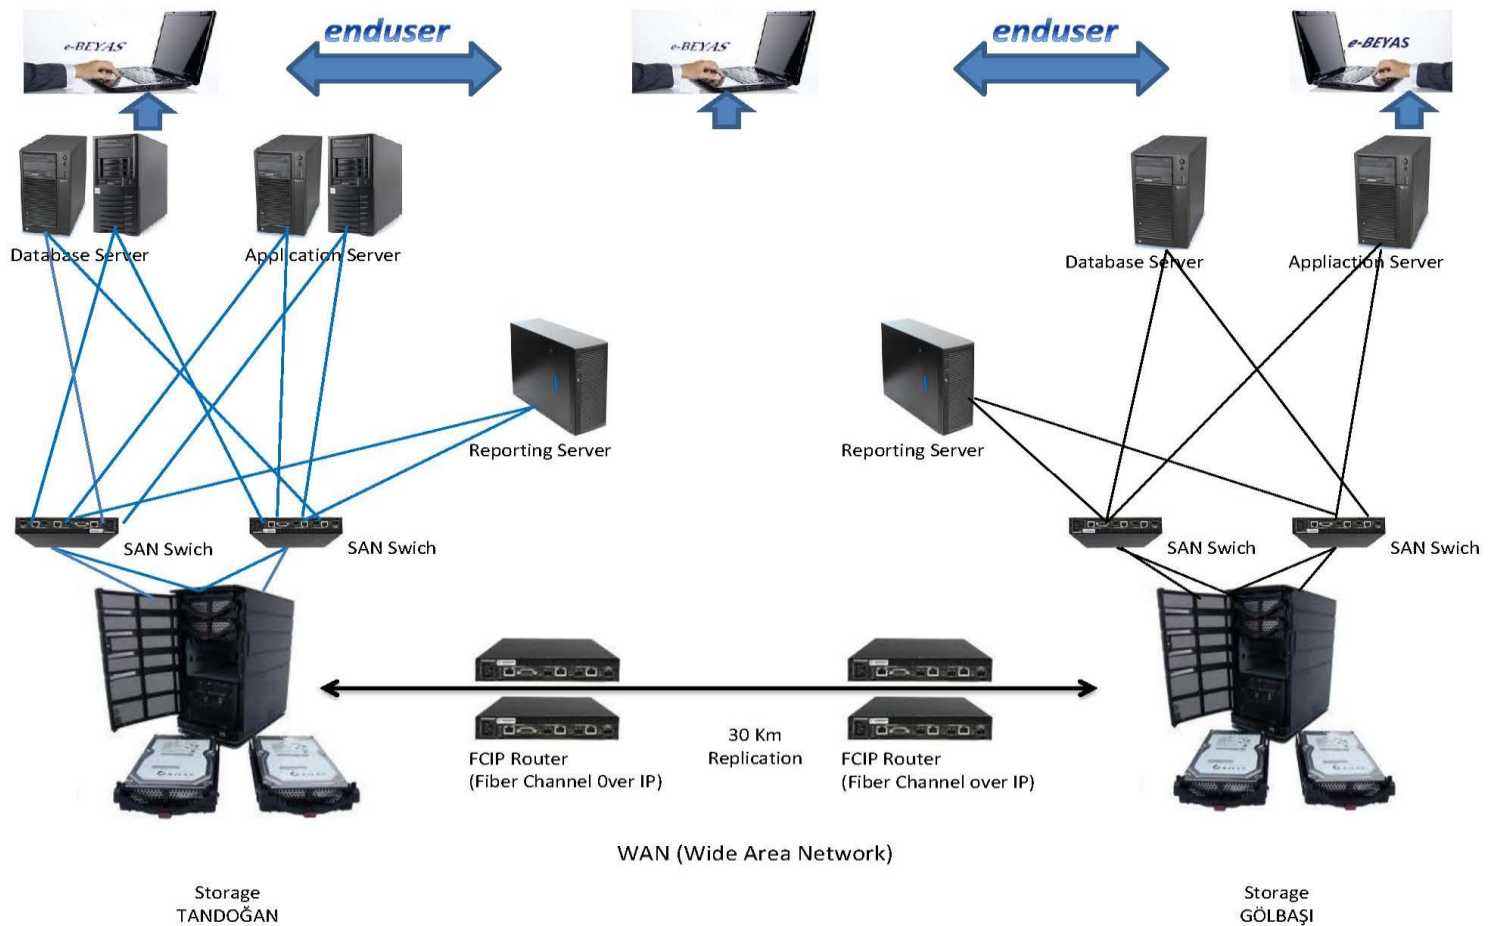

## Transition Process to e-BEYAS

- Revising the critical processes,
- Determining and designing standard e-record patterns/forms belonging to the work processes, and creating process schemes, →
- Making Ankara University BEYAS process to overlap with Electronic Records Management →

# Software and System Architecture

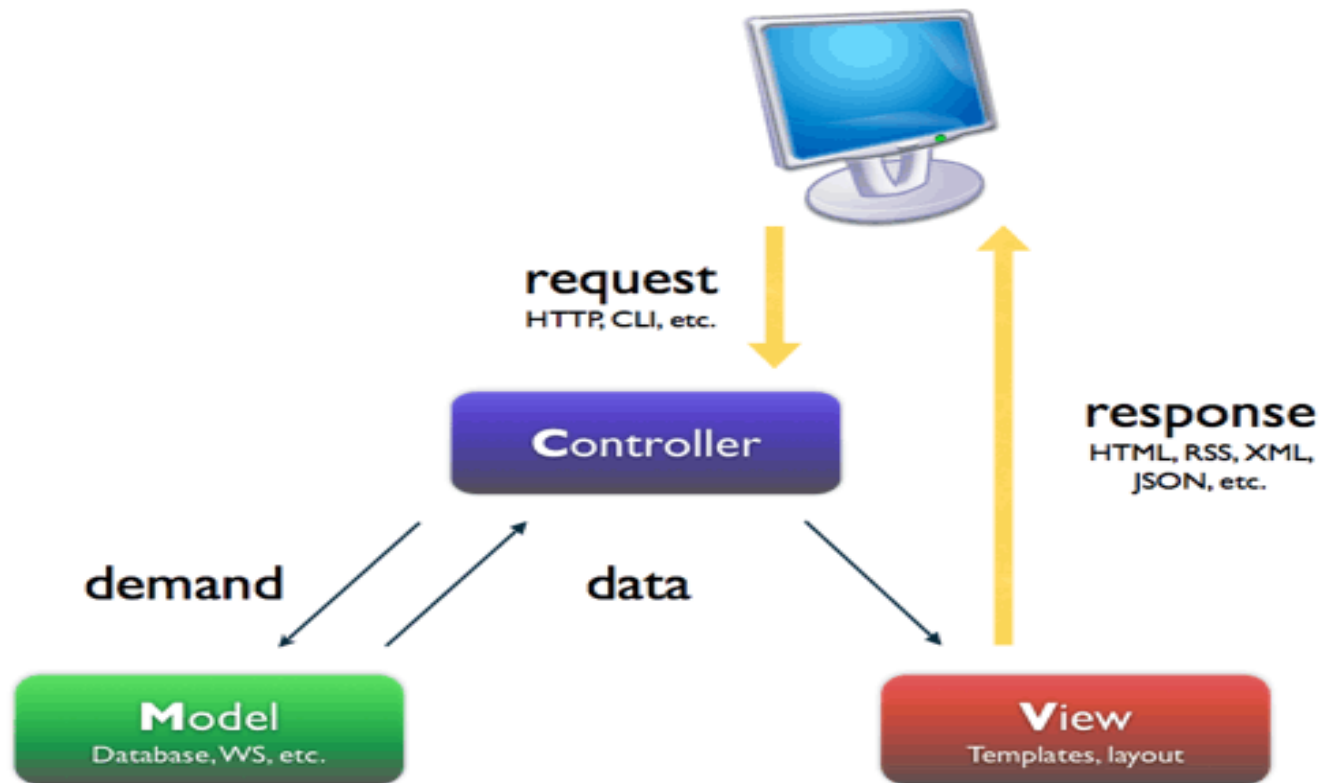

## e-BEYAS Hardware System

# Software and System Architecture

## MODEL VIEW CONTROLLER

Three layer interaction is presented. MVC is developed to make JAVA- based web implications easy.

# SOFTWARE ARCHITECTURE

## PRESENTATION LAYER

Primefaces, JSF

## SERVICE LAYER Spring Framework

## DATA LAYER Hibernate, JPA

# e-BEYAS and Mobile Records Integration

*Variety of Mobile Communication Systems.  
Source: Gartner (August 2011) [8].*

# Mobile Compatible Infrastructure

## Disadvantages

- Variety of smart devices
- Different operating systems
- Different applications dependent on certain system
- Increasing cost

## Mobile Compatible Infrastructure

# Transition to Mobile Records Management

### Advantages:

- Variety of smart devices
- One application as HTML5 compatible
- Applications in appearance and quality of native application on web browser regardless of the operating systems of mobile device
- Produces updated output
- displaying audio and video on a correspondence or work process and information notes
- Easier & more productive usage: faster feedback
- Cost effective

# Mobile Compatible Infrastructure

## Integration of Mobile Signature

- Independent platform type of e-signature
- Independent from platform, time and place with remote access.

# Mobile Compatible Infrastructure

## Integration of E-Mail and SMS

- **Facilitates quick inquiries about correspondence**
- **Informing by writing document numbers via SMS**
- **5 different security levels**
- **Unique web address (like *booking.com* )**
- **Only to institutional e-mail addresses and the system defined mobile numbers**

## Conclusion

- **Mobile services and operators will play leading role current e-government integration**
- **RMS need to adapt to the structure that can respond the changes in vision and searches occurred in the working culture of institutions.**
